Author : Mel'chenko, V. S.

Title : Determination of the absolute concentration of atoms of a multicomponent arc gas

Periodical : Zhur. eksp. i teor. fiz. 28, 628-629, May 1955

Abstract : The method of N. A. Prilezhayeva (Trudy SFTI, 28, 83, 1949) permits one to determine the absolute concentrations of atoms in the positive column of a direct-current arch (V. N. Goryachev, Trudy SFTI, 30, 61, 1950; M. A. Alekseyev, Trudy SFTI, 32, 21, 1953). The present writer considers that by this method one could determine the absolute concentrations in an arc gas of more than the usual two-component composition. He presents results of his calculations in agreement with the data of A. K. Rusanov on the volatility of elements (Spektral'nyy analiz rud i mineralov, State Geol. Press 1948). Six references.

Institution : Siberian Physicotechnical Institute (SFTI)

Title : Pathologic Changes in the Temporal Bone Accompanying Mastoiditis.

Orig Pub : Sb. tr. Kurskiy med. in-t, 1956, vyp. 11, 48-51.

Abstract : In acute mastoiditis, which had developed in the presence of acute or subacute purulent otitis, gross involvement was revealed in the preantral area in the form of caries which in a number of cases spread to deep layers of the tip of the mastoid process and, sometimes, toward the middle cranial fossa. Microscopically, there was exudative inflammatory process in the bone as well as in the mucous membranes of air cells with the formation of bony sequestra in some cases. At times, there were vascular thrombosis and hemorrhages. In a series of cases granulation tissue developed. In one patient, with acute mastoiditis following chronic suppurative otitis

"Model of a Language-Mediator (go-between) for Machine Translations."

Theses - Conference on Machine Translations, 15 - 21 May 1958, Moscow.

MEL'CHUK, I. A.,

"Machine Translation From Hungarian to Russian," p 222, Problems of Cybernetics,  
No 1, Moscow, Gizmatgiz, 1958. 268 pp.

This collection of articles deals with general problems of cybernetics, information theory, theory of algorithms and automatic machines, theory of control systems, theory of games and tactics, methods of operations analysis, problems on the theory of calculating machines, programming, and the application of cybernetics to other sciences, such as biology, economics and linguistics. "Problems of Cybernetics," as a recurrent publication, will continue to include original papers, survey articles and translations, and like the present work, will contain the results of seminars in cybernetics held at Moscow Univ.

9(5) PHASE I: SOVIET EXPLOITATION SOV/3176

Problemy Kibernetiki, Vol. 2 (Problems of Cybernetics, No. 2). Moscow, Printgiz, 1959. 323 p. Printed slip inserted. 18,000 copies printed.

Ed.: A. A. Lyapunov; Compilers-Editors: O. B. Lupanov, Yu. I. Yanov, Eds.; N. Yu. Pil'yachak, S. V. Fabrikant, and Yu. M. Smolyanikov, Tech. Ed.; A. A. Konoplyantsev, and M. L. Smolyanikov, Tech. Ed.; S. N. Akhiezer.

PURPOSE: The purpose of this collection of articles is to organize scientific papers on cybernetics and to unite the efforts and interests of Soviet scientists working in this field.

COVERAGE: This is the second volume of "Problemy Kibernetiki", dealing with problems of biology, mathematics and engineering as they relate to cybernetics. The first volume, which appeared in 1959, considered problems of programming, machine translation and computer design. The second volume proposes to include a still greater number of subjects related to cybernetics. The editors list 5 recent Soviet books (including 2 translations) dealing with cybernetics. They thank the following persons for their help in preparing the book for publication: G. V. Yakulovskaya, F. L. Davrilova, A. A. Ruchnik, B. N. Sankov, M. L. Feftlin, and V. S. Shitarkman. References follow each article.

#### PART IV. CONTROL SYSTEMS AND COMPUTERS

Svetlin, A.N., and V.K. Smirnov (Moscow). Operational Cathode-ray

The Storage Device 191

The Authors describe the principle of operation of the storage device for the Soviet computer "Strela-1", which consists of cathode-ray tubes of the Potentielioskop type, with a storage capacity of 2048 words of 43 bits. No references are given.

Zverko, M.G., V.S. Gurevich, A.Ye. Kobrinikov, A.Ya. Syrkin, N.I. Pastushik, and Ya.S. Yakobson (Moscow). On the Thoracoelectric System of Control 203

The article deals with the utilization of biological myoelectric currents in the operation of technical devices. It also describes the principle of operation and design of a model of a servo-drive built for this purpose. There are 12 references.

#### PART V. CONTROL PROCESSES IN LIVING ORGANISMS

Svetozar Romashov, N.V. Sverdlovsk, and K.R. Bannik (Berlin). On Stability and Amplifier Principle in Biology 213

The article concerns problems of circulation and hereditary information from generation to generation and the physical processes of its biological storage in living organisms. The authors summarize investigations in that field. There are 52 references, 16 Soviet (5 translations), 18 English, 14 German, and 4 French. Kulagin, L.V. (Moscow). Investigation of Extrapolative Reactions in Animals 229

The article deals with the physiology of the activity of the nervous system in animals. The article according to the editor, is of great interest for the study of cybernetics since it concerns relations between biology, engineering and mathematics in the investigation of control processes occurring in living organisms. There are 11 references: 9 Soviet (2 translations), and 2 English.

#### PART VI. PROBLEMS OF MATHEMATICAL LINGUISTICS

Kulagina, O.S., and O.V. Yakulovskaya (Moscow). Experimental Translations from French into Russian on the "Strela" Computer 283

The programming algorithms for the machine translation of mathematical texts from French into Russian were developed by O.S. Kulagina and L.A. Melnikova. These algorithms assume the existence of a special vocabulary which contains not words but instead, the authors give examples of translations obtained and methods used in eliminating errors. No references are given.

Kulagina, O.S. (Moscow). Operational Description of Translation Algorithms and Automatizing the Process of Their Programming 289

Mathematicians of the Soviet Union have developed a programming technique of operational programming based on an external action that is written linearly across the page. This operational programming was tested on translations from French into Russian. The author described the class of logical operators used. The sequence of operators will indicate their sequence of performance. The following types of operations are used: condition, result's and neutral. In addition, the author explains the rules of forming the program code.

TITLE: Work Concerning Mechanical Translating in the USSR  
(Raboty po mashinnomu perevodu v SSSR)

PERIODICAL: Vestnik Akademii nauk SSSR, 1959, Nr 2, pp 43-47 (USSR)

ABSTRACT: The working out of this problem was started in the Soviet Union in 1955 at the Institut Tekhnicheskikh i vychislitel'nykh tekhniki Akademii nauk SSSR (Institute for Precision Mechanics and Computation Technique of the Academy of Sciences, USSR) and the Matematicheskiy institut im. V. A. Steklova Akademii nauk SSSR (Mathematical Institute imeni V. A. Steklova of the Academy of Sciences, USSR). Later participants in this work were: the Institut yazykoznaniya Akademii nauk SSSR (Institute of Philology of the AS USSR), the Leningrad university where an experimental laboratory for mechanical translating was established, the Vychislitel'nyy tsentr Akademii nauk Armyanskoy SSR (Computation Center of the AS Armyanskaya SSR), the Institut elektroniki, avtomatiki i telemekhaniki Akademii nauk Gruzinskoy SSR (Institute of Electronics, Automation and Telemechanics of the AS Gruzinskaya SSR). To begin with, the work consisted in the compilation of

Card 1/2

SOV/30-59-2-8/60

Work Concerning Mechanical Translating in the USSR

so-called algorithms of mechanical translating. Between 1955 and 1957 the algorithms for French-Russian, English-Russian, Chinese-Russian, German-Russian, Japanese-Russian and Hungarian-Russian translations were compiled and partly tried with computing machines. Furthermore, the method of mechanical translating is described in detail. It basically consists in a previous working out of an artificial "auxiliary language" (yazyk posrednik). The mechanical translation is then carried out in two stages: From the foreign language into the "auxiliary language" and from the "auxiliary language" into Russian. For this purpose electronic computers are used. Linguists, mathematicians and engineers have the task of designing the special machinery necessary for this purpose. The coordination of this work was promoted by the 1<sup>st</sup> Vsesoyuznaya konferentsiya po mashinnomu perevodu (1<sup>st</sup> All-Union Conference on Mechanical Translating) which took place in Moscow in May 1958. Hitherto all experimental translations have been made with universal computers which are not suitable for this purpose.

TITLE:

Problems of Mathematical Language Studies

PERIODICAL:

Vestnik Akademii nauk SSSR, 1959, Nr 8, pp 119 - 120 (USSR)

ABSTRACT:

The Komitet po prikladnoy lingvistike pri sektsii rechi Komissii po akustike Akademii nauk SSSR (Committee of Applied Linguistics of the Language Section of the Commission of Acoustics of the Academy of Sciences, USSR) and the University of Leningrad held a meeting in Leningrad from April 15 to 21 devoted to mathematical language studies. Almost 500 representatives of various institutions participated in the proceedings, among them representatives of 24 institutes and laboratories of the Academy of Sciences, USSR, and the Academies of Sciences of the Union Republics, as well as scientists from China, Czechoslovakia, Poland, and Rumania. The following papers were read: V. V. Ivanov spoke on the necessity of creating a special theory of relationships between language systems. V. N. Toporov touched upon the question of introducing methods of probability calculus into linguistics. S. K. Shaumyan was of opinion that language structure research ought to be re-

✓

garded as an abstract science. N. D. Andreyev reported on an algorithm of automatic application of similarity principles to languages developed by him. V. M. Zolotarev, R. M. Frumkina, G. S. Tseytin, and I. I. Revzin reported about questions of modeling. Ye. V. Paducheva, and Z. M. Volotskaya dealt with concrete linguistic themes. Questions of the mediating language (*yazyk-posrednik*) were discussed by N. D. Andreyev and S. Ya. Fitialov, B. M. Leykina, V. P. Berkov, A. R. Belopol'skaya, A. B. Kovrigin, and T. M. Nikolayeva. G. E. Vleduts and V. K. Finn, M. M. Langleben, D. G. Lakhuti, N. A. Stokolova, and A. L. Shumilina reported on work in the field of information language for chemistry and geometry. M. I. Beletskiy spoke on symbol recording of the algorithm of machine translation. V. M. Glushkov, V. A. Kovalevskiy, and G. P. Mel'nikov reported on technical apparatus permitting the processing of language informations. The further directions in which work is done were outlined at the meeting. Recommendations were made for the training of cadres as well as for the establishment of the institut semiotiki v sisteme Akademii nauk SSSR (Institute of Semiotics in the System of the Academy of Sciences, USSR).

2160. MELCZER M. Dept. of Dermatol., Univ. med. Sch., Pécs. • *Aetiology of dermatitis herpetiformis and pemphigus chronicus*  
ACTA MED. ACAD. SCIENT. HUNG. (Budapest) 1954, 6, 3-4 (255-272) Illus. 20  
Pemphigus chronicus and dermatitis herpetiformis are viral diseases, as proved by successful inoculation of chick embryos with filtrate prepared from pathological material. The virus, which is pathogenic for 40-90% of chick embryos, may give rise to bulla formation in the skin and causes a severe affection of the CNS. Although the virus of dermatitis herpetiformis produces milder lesions in the chick embryo than the virus originating from cases of pemphigus, on the basis of the similarity of changes the 2 viruses should for the time being be considered as identical. The viruses demonstrable in the lesions of both pemphigus chronicus and dermatitis herpetiformis are premulin-positive. In electron-micrographs the virus appears as a medium-sized, brick-shaped structure. On the basis of experimental evidence it is claimed that pemphigus chronicus and dermatitis herpetiformis are chronic, viral, non-epidemic diseases of the CNS, accompanied by skin symptoms.

Urticaria pigmentosa is considered as an inherited systemic skin condition whose outstanding histological feature is an aggregation of mast-cells. The symptoms can be explained by the antagonism of heparin and histamine. The primary process is one of increased heparin production which leads to increased thrombin inactivity and with it, to the release of histamine. This leads to hyperzemia, pruritus and urticaria. The skin in these patients is hypersensitive to histamine and will develop inflammation followed by pigmentation if histamine is injected intradermally. Passive transfer experiments gave negative results. It is thought that the condition should be called 'heparinoderma' which is aetiologically more correct than the present name.

Reticuloendothelial storage and leucocytic phagocytosis  
KISÉRL. ORVOSTUD. 1956, 8/4 (398-400)

In previous investigations it was shown that RES storage is due to an injury potential following changes in ionic concentrations. It obeys the same laws as impulse conduction in nerve. Substances which cause anodic (procaine; Ca) or cathodic block (KCl, NaCl) inhibit storage. The experimental data indicate that RES storage and leucocytic phagocytosis are identical processes; both of them occur only in a protein-containing medium. The particles to be taken up are bound to the serum albumin and acquire a negative charge. In the 1st stage the particle-albumin complex is adsorbed on the positively-charged capillary wall or on the leucocyte. This leads, as a result of changes in ionic concentration, to an increase of positive charge on the wall, and the result is that an electrical field similar to the injury potential develops, this promoting the electrophoretic transport of the particle through the capillary wall in the extracellular space, or in the leucocyte.

MALIGNANT EPITHELIAL DEGENERATION IN THE SKIN AND AD-  
JACENT MUCOSAE - Elektrometrie zur frühzeitigen Erkennung der bös-  
artigen epithelialen Umwandlung der Haut und umgebender Schleimhäute -  
Melczer N. and Kiss J. Dermatol. Klin., Univ. Pécs - HAUTARZT

1957, 8/9 (395-397) Illus. 3

Personal studies have led to the conclusion that for the early diagnosis of malignant epithelial degeneration of the skin and adjacent mucosae, the potential measurements used in these studies can greatly supplement the findings of biopsies. Electrometry can, in all preblastomatous preliminary stages, reveal the beginning of the malignant epithelial degeneration through the increased positive charge in the focus.

In 77 personal cases, leucoplakia oris was observed exclusively, in patients with

656

prostheses or metal dental crowns. Measurements with polarizing or non-polarizing electrodes of copper sulphate or mercury-calomel electrodes, also with string galvanometers or an amplifier with electronic valves showed a direct current of 40-50 mv. between the focus of leucoplakia and the prosthesis or crown. The effect of the above-mentioned type and intensity of current within a period of 30 to 40 min. was demonstrated in rabbits and rats. 'Severe cellular damage' is reported. The metal tooth substitute together with the saliva is regarded as a galvanic element and is responsible for the pathogenesis of leucoplakia oris.

148. ELECTRICAL METHOD FOR DETECTION OF EARLY CANCEROUS GROWTH OF THE SKIN. Melczer N. and Kiss J. Dept. of Dermatol. and Venereol., Univ. of Pécs. NATURE (Lond.) 1957, 179/4571 (1177-1179)

A sensitive apparatus was used to determine the effective resistance of the skin to galvanic current. A negative electrode was held in the hand, and the positive placed on the lesion to be tested. This current strength was compared with that of a normal area, usually contralateral. The authors found lowered resistance consistently and exclusively in malignant lesions. Thus, lowered resistance in squamous- and basal-cell carcinoma, intraepidermal carcinoma, erythroplasia; normal resistance in senile keratoma, balanitis plasmocellularis, verruca senilis, leuco-plakia, psoriasis, eczema. The recognition of malignancy was more accurate than clinical differential diagnosis.

466. SPECIFIC HEMAGGLUTININS IN SERUM AND SPINAL FLUID OF PATIENTS WITH PEMPHIGUS AND DERMATITIS HERPETIFORMIS - Melzter N. and Vásárhelyi P. Dept. of Dermatol., Univ. of Pécs - ACTA DERM.-VENEREOL. (Stockh.) 1958, 38/3(198-207) Tables 3 Illus. 2 In 23 cases of pemphigus and in 14 cases of dermatitis herpetiformis the blood sera contained an agglutinating factor against the bullous and spinal fluid of the same patients. The indirect haemagglutination test in these cases gave over 90% positive results. In homologous tests employing iso-sera from patients with P. (16 cases) against spinal fluid from other patients with P. (32 cases) positive results were obtained in 57.5%, while similar tests against bullous fluid yielded positive results in 86%. In a group of dermatitis herpetiformis cases the sera were tested with homologous D.H. antigens. In the spinal fluid the authors observed in 72.2% a positive reaction, with bullous fluid, however, only 33% yielded positive results. In cross agglutination tests between P. and D.H. materials the haemagglutination elicited in high incidence positive results, indicating that the two disorders are related or identical. Using P. sera and as antigens bullous or spinal fluids of D.H. patients the HA tests have given frequently positive results. The former exerted in 87.5% and the latter in 61.12% a positive reaction. Inversely tested D.H. sera against bullous and spinal fluid of P. cases showed positive results in 55.5% and 70.53%, respectively. Antibodies in the sera of P. and D.H. patients against P. and D.H. material can be measured, in vitro, by adsorbing the antigen onto washed sheep red cells and using such antigen coated corpuscles with the P. and D.H. patients' serum in a haemagglutination test. Human O, Rh negative red cells proved to be unsuitable for these studies. According to the agglutinin absorption and haemagglutination inhibition tests the antibodies demonstrable in the sera from P. and D.H. cases are not auto-antibodies produced by the affected skin. Spinal fluid from patients with P and D.H. has antigenic properties. This conforms to the authors' earlier view that pemphigus and dermatitis herpetiformis are identical or related viral diseases of the CNS.

2713. EARLY RECOGNITION OF MELANOBlastomas - Zur frühzeitigen Erkennung von Melanoblastomen - Meliczer N. and Kiss J. Univ. - Klin. für Haut- und Geschl.-Krankh., Pécs - DERMATOLOGICA (Basel) 1958, 117/4 (242-252)

After summarizing the usual but unsatisfactory procedures for an early diagnosis of the malignancy of a melanoma, a report is given on an electrometric method that has been worked out and tried on numerous subjects. Not only malignant epithelial tumours could be diagnosed but also the malignant change of a melanoma could be detected at the very beginning on the basis of a lowering of the potential resistance, measured by a simple apparatus. In 465 persons with naevi pigmentos. and 23 with juvenile melanoma, negative results were obtained, but with 14 cases of melanomalignoma, 2 of which were achromic, positive values were obtained in each instance. In one out of 4 cases of melanotic precancerous freckles, in which a lowering of resistance suggested the beginning of a malignant change, histological examination revealed an actual malignant change. The procedure is therefore also suitable for the diagnosis of the beginning of a malignant change. (XIII, 5, 16)

1718. LECITHIN-TOLERANCE TESTS IN PSORIASIS PATIENTS - Lezithin-  
belastungsversuche bei Psoriatikern - Melczer N. and Bodzay J.  
Univ. - Klin. für Haut- u. Geschl. Krankh., Pécs - DERM. WSCHR. 1958,  
137/23 (608-611) Graphs 4

Changes in the blood serum after lecithin injection in 15 psoriasis patients and 10 healthy subjects are reported. The phospholipid metabolism was found to be disturbed in psoriasis, probably owing to retarded decomposition of the phospholipids in the blood. The reduction in the cholesterol level after lecithin-loading also points to a retarded lipid metabolism. When it is considered that the psoriatic foci are founded on a local phospholipid accumulation, it can be concluded that the disturbances in lipid metabolism demonstrated in psoriasis patients should not be regarded as secondary changes, but should be accorded an aetiological role.

"The Virus Theory of Malignant Tumors in the Light of Recent Investigations."

Budapest, Orvosi Hetilap, Vol 104, No 29, 21 July 1963, pages 1345-1350.

Abstract: The author presents a historical survey of the research conducted to determine the mode and extent of influence played by viruses in the development of leucoses and solid tumors of animals. The nature of the viruses, their multiplication and various theories on their role in the malignant changes of higher organisms are discussed in detail. The role and achievements of electron microscopy in cancer research are presented. The article summarizes the more significant findings of a host of investigators and discusses the problems extensively. 1 Eastern European, the rest Western references.

TITLE: Metal sputtering

SOURCE: Postepy fizyki, v. 16, no. 6, 1965, 701-714

TOPIC TAGS: ionization phenomenon, sputtering, ion bombardment

ABSTRACT: The author reviews the literature on metal sputtering and gives some of the principal formulas for factors relating to quantitative calculations of this process such as the sputtering factor defined as the ratio between the number of atoms emitted by the metal and the number of bombarding ions, and the ion threshold energy, i. e. the lowest ion beam energy necessary for initiating sputtering in a given target. There is also a brief review of the literature on the relationship between the number of atoms emitted from the metal and the angle of departure. The effect which the angle of incidence has on the sputtering factor is discussed and curves showing this relationship are given for iron and copper. Sputtering of single

MELDER, I. K. -- "Influence of Variable Axial Forces on Transverse Vibrations of Bars and Plates. Latvian State U, 1954 (Dissertation for the Degree of Candidate of Technical Sciences)

SO: Izvestiya Ak. Nauk Latviyskoy. SSR, No. 9, Sept., 1955

SOV/124-58-8-9093

Translation from: Referativnyy zhurnal, Mekhanika, 1958, Nr 8, p 112 (USSR)

AUTHOR: Melder, I.K.

TITLE: The Free Transverse Vibrations of a Slightly Bent Bar (Svo-bodnyye poperechnyye kolebaniya vypuchivshegosya sterzhnya)

PERIODICAL: Uch. zap. Latv. un-t, 1957, Vol 10, pp 71-80

ABSTRACT: Examining the vibrations of a slightly bent bar fastened at either end to a stationary hinged support and subjected to compression from an initial force  $S_0$ , the author takes into account the reactive axial force. The approximate equation for the problem (wherein all symbols used are standard)

$$EI \frac{\partial^4 y}{\partial x^4} \left[ S_0 - \frac{EF}{2l} \int_0^l \left( \frac{\partial y}{\partial x} \right)^2 dx \right] \frac{\partial^2 y}{\partial x^2}$$

through the substitution

$$y(x, t) = H(t) \sin \frac{\pi x}{l}$$

Card 1/2

SOV/124-58-8-9093

The Free Transverse Vibrations of a Slightly Bent Bar

reduces to the equation

$$m\ddot{H} + aH^3 + \delta H = 0$$

which can be integrated in terms of elliptic functions. The author discusses the nature of the free vibrations that occur whenever  $\delta > 0$  ( $S_0 < P_e$ ) and  $\delta < 0$  ( $S_0 > P_e$ ). Calculated results are compared with experimental findings. The considerable discrepancy between the two is accounted for by the fact that in the theoretical solution the factor of damping is not allowed for.

TITLE: Quantum field theoretical investigation of multiple processes

PERIODICAL: Moscow. Universitet. Vestnik. Seriya III. Fizika,  
astronomiya, no. 3, 1962, 46-59

TEXT: Multiple production of  $\pi$ -mesons in  $\pi$ -N,  $\gamma$ -N, N-N, and  $\pi$ - $\pi$  collisions is studied and the corresponding graphic renormalization equations are given. The mathematical structure of the theory is similar to that of the Tamm-Dankov method. It differs only in that the infinite system of equations does not break off, but a solution being reached through a reduction of the propagation function and on other assumptions. Proceeding from the Tomanaga-Schwinger equation

$$i \frac{\delta}{\delta \sigma} U_{[\sigma, \sigma_0]} = H(x) U_{[\sigma, \sigma_0]}$$

where

Card 1/5

$$U_{[\sigma, \sigma_0]} = \sum_{ij, nm, kl} U_{[\sigma, \sigma_0]}^{(ij, nm, kl)}.$$

$U^{(ij,nm,kl)}$  is the transition matrix for a graph with  $i, n, k$  incoming, and  $j, m, l$  outgoing boson, fermion and antifermion lines, respectively.

For  $U^{(ij,nm)}_{[\sigma, \sigma_0]}$  it is established that

$$U^{(ij,nm)}_{[\sigma, \sigma_0]} = \int d^4z \sum_{\text{graphs}} \prod_{i=1}^m \bar{u}(p_i) \prod_{j=1}^n u(p_j) \prod_{l=1}^l \psi^{(+)}(p_l) \prod_{k=1}^k \psi^{(-)}(p_k) \times \\ \times Q^{(ij,nm)} \exp \left[ iz \left( \sum_{i=1}^m p_i + \sum_{l=1}^l p_l - \sum_{j=1}^n p_j - \sum_{k=1}^k p_k \right) \right]. \quad (4),$$

where  $Q^{(ij,nm)}$  is a coefficient function, for the individual collisions, as determined from the graphs. This method offers the advantage that summation does not necessitate all graphs being written explicitly as in the perturbation theory. Since a closed solution is impossible, the procedure is simplified by disregarding the production of nucleon-antinucleon pairs in the intermediate and final states, disregarding spin effects, and assuming low energy in the mesons produced. In addition, scalar and pseudoscalar mesons with scalar interaction are

Quantum field theoretical...

studied. Following the determination of  $Q^{(ij,nm)}$  for the  $\pi\text{-N}$ ,  $\gamma\text{-N}$  collisions the probability  $w_n$

$$W_n = n! (2\pi)^4 \int \frac{d^3 p}{2E_p} \prod_{l=1}^n \frac{d^3 k_l}{2k_{0l}} |Q^{(in,il)}|^2 \times \\ \times \delta(E_p + \sum_{l=1}^n k_{0l} - e_0) \delta^3(\vec{p} + \sum_{l=1}^n \vec{k}_l). \quad (8)$$

is obtained by insertion into (4) where  $p, k_i$  is a four-momentum of the final particles. The integral in (8) is the "generalized phase integral" which, for N-N and  $\pi\text{-}\pi$  collisions has similar shape. Its calculation is illustrated for  $\pi\text{-N}$  collisions. For N-N collisions, similar considerations as for  $\pi\text{-N}$  collisions, give

$$w_n \sim (gm)^{2n} \left( \frac{\pi}{2\omega^2} \right)^{n/2} \frac{n! (z-1)^{2n-1}}{[(n+1)!]^2 (2n-1)!},$$

Quantum field theoretical...

where  $z = \frac{E_q}{m}$ . For  $\pi$ - $\pi$  collisions the interaction is brought about by a nucleon-antinucleon pair (a term  $\frac{1}{\phi^4}$  being added in the interaction Hamiltonian). If meson scattering only is considered, this influences the multiplicity only slightly. The angular distribution tends to higher isotropy in the presence of meson interaction. For the angular distribution of relativistic mesons in N-N collisions  $\frac{dn(\theta)}{d\theta} \sim \frac{1}{\sin^3 \theta}$ , and for the energy distribution

$$\frac{dn(k)}{dk} \sim \frac{1}{\omega^2} + \frac{\omega^2}{4k^3} \cdot \ln \left( \frac{\omega + k}{\omega - k} \right)^2, \quad \omega^2 = k^2 + \mu^2.$$

Summary of the results for multiplicity:

B111/B112

$$\bar{n}_{N-N} \approx \frac{\pi^{1/2}}{3} \left( g \frac{m}{\mu} \right)^{1/2} (z^{1/2} - 1)^{1/2}, \quad z = \frac{V_{\text{RF}}^2}{2m},$$

$$\bar{n}_{\pi-N} = \bar{n}_{\pi-N} = \frac{\pi^{1/2}}{4^{1/2}} g^{1/2} \left( \frac{m}{\mu} \right)^{1/2} \left[ \left( \frac{V_{\text{RF}}^2}{2m} \right)^{1/2} - 1 \right]^{1/2},$$

$$\bar{n}_{\pi-\pi} \sim \begin{cases} \left( \frac{E^c}{2\mu} - 1 \right)^{1/2} & (\text{I}) \\ \left( \frac{E^c}{2\mu} - 1 \right)^{1/3.5} \div \left( \frac{E^c}{2\mu} - 1 \right)^{1/2} & (\text{II}) \end{cases}$$

No qualitative agreement could be found between the formulas and the experiment. There are 5 figures and 1 table.

Histological changes in the CNS due to barium chloride poisoning Orv. Hetil. 1959, 91/26  
(815-817)

Acute or chronic poisoning was produced in rabbits by 0.05 g. and 0.005 to 0.01 g.,  
respectively, per kg. body weight. The survival time in acute poisoning was 140-150  
minutes and 98 to 193 days in chronic poisoning. Changes observed in the vessels and nerve  
were attributed to the direct action of barium. Lesions of the lamina ganglionaries and  
multi-formis were observed mainly in the temporal area. The corpus luysi, thalamus and  
hypothalamus, inferior corpora quadrigemina and the anterior horns in the lower segment  
of the cord were also involved, but neuronal histological changes were not characteristic.  
The changes due to small doses deserve particular attention because these doses were smaller  
than the therapeutic doses used when barium chloride is substituted for digitalis.

Central nervous system in barium chloride poisoning.  
G. Fazekas, B. Feikai, and B. Melegit (Univ. Szeged, Hung.). Virchow's Arch. pathol. Anat. u. Physiol. 324: 1110-15 (1953) (in German).—The subcutaneous injection of an aq. soln. of BaCl<sub>2</sub> at 0.05 g./kg. caused acute toxicity with death after 2-2.5 hrs. Chronic poisoning was achieved by the injection of solns. at 0.01, 0.002, and 0.005 g./kg. Rabbits in this series were killed at 98-193 days. Histological findings in the central nervous system are described.

ABSTRACT : Kefir grains were frozen at -18° to -28° and stored at -18 for a period ranging from 24 hours to 9 months. The frozen grains, admixed with boiled milk, and then cooled to +18, became active in 10 to 20 days. -- A. Marin.

Abstract: The basic stages of the technological process are established. Fermentation of a somewhat condensed milk of 1.06-1.07 density by  $0.05\text{-}0.1\%$  Str. lactis at  $28\text{-}30^{\circ}$  for 15-18 hours produces a thin dispersion of casein and a normal increase in acidity. Good results are obtained in spray drying of a somewhat condensed fermented milk. Author's abstract.

227-233.

**Abstract:** The possibility of preserving kefir yeast by freezing was studied. It was established that frozen kefir yeast stored for 9 months at  $-18^{\circ}$  can be easily activated. Lactic acid and alcohol fermentation produced by the thawed kefir yeast becomes normal after 10-12 days. Author's abstract.
